

- ▶ Do you efficiently and effectively regression test EVERY release of your business critical systems?
- ▶ Do you want to improve your ROI from test automation?
- ▶ Would you like to avoid the lengthy and expensive trial-and-error approach to implementing test automation?

Utopia's approach to test automation separates the tasks of specifying the steps and data that define the test cases from the technical test suite components that execute the test. Your subject matter experts are free to focus on what they do best – define tests, while automation engineers handle the technical aspects of test automation.

Utopia Solutions' Velocity™ Test Automation services ensure clients get the most from their investment in functional test automation by applying proven techniques and assets to address your unique testing challenges. Our Velocity services provide well-defined solutions that significantly reduce your time to value.

Our Velocity services are based on our Automated Testing Framework (ATF). The ATF includes our test automation methodology and assets, and allows us to deliver high value in an accelerated time frame.

We can scale our Velocity Test Automation services to meet your specific IT needs. Whether you require a turnkey implementation, focused mentoring or ongoing support of your test automation effort, Utopia can deliver the expertise, experience and value you need.

Velocity – Automation Strategy

Our Automation Strategy service provides the optimal foundation for test automation success. It is based on our proven assessment methodology and includes a detailed strategy covering automation scope, approach, ROI analysis, and the supporting processes required to sustain long-term success. Our strategy service is perfect for organizations looking for a roadmap to accelerate their automation success.

Velocity – Implementation

Our Automation Implementation service provides a complete test automation solution, from planning through initial execution. The Implementation service is ideal for organizations looking for a turnkey test automation solution. Implementation can include knowledge transfer to enable internal staff, or combined with our automation managed service for an outsourced solution.

Velocity – Mentoring

Our Automation Mentoring service provides organizations with the knowledge and skills required to successfully create and maintain a test automation solution. Our expert practitioners will lead your team through a hands-on project in your environment to ensure you develop skills relevant to your objectives.

Velocity – Managed Service

Our Automation managed service provides an effective and cost efficient test automation capability built on Utopia's proven Automated Testing Framework. Our team provides a seamless integration of test automation into your existing regression testing efforts – without the risks and costs associated with developing automation internally.

What can Utopia Solutions do for you?

- Significantly accelerate your time-to-value associated with test automation
- Achieve greater visibility into your system performance, scalability and capacity
- Effectively and efficiently test your software while your staff focuses on your core business
- Provide expert level implementation, mentoring and support for your HP Software solutions
- Provide you with the ability to deploy mission critical systems with confidence
